5 AI in Data Production

We continue to harness GenAI in data production yielding significant and promising results. We have been able to multiply & augment our datasets while reducing manual intervention and even shrinking headcount, which is a strong testament to our use of automation and intelligence in data production.

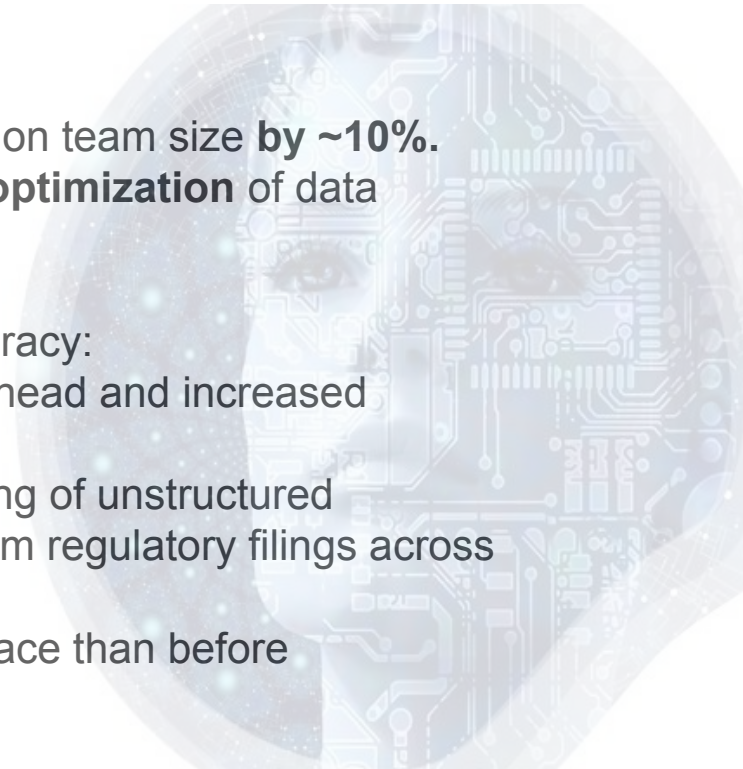

Accelerated Throughput with Leaner Data Production Teams

- **2024:** Expanded coverage of key data points by 5X while **reducing** data production team size **by ~10%**.
- **H1 2025:** Further multiplied data coverage by over 2X with an **additional ~20% optimization** of data production team's headcount

To expand further, we have been able to enhance the pace of additions with high accuracy:

- **Increased pace** of data processing in existing processes: Reduced manual overhead and increased throughput (eg., companies processed at the top of the funnel increased by 4X)
- **Expanded coverage** across multiple datasets: Achieved through faster processing of unstructured documents (eg., accelerated extraction of financials and company information from regulatory filings across 20+ countries).
- **Faster launch of new datasets:** Able to launch new datasets at a much faster pace than before (eg., area-pincode mapping for sales teams launched in under a week).

We expect continued **optimization** in the data production units and **accelerated throughput** of the systems. We are excited about the possibilities of GenAI and its potential to help us build data on private companies globally.
