measure by RBI like hike in mark up over LIBOR for FCNR B Deposits, swap facilities for FCNR B Deposits / Overseas Borrowings, separate USD window for oil companies, reduction in ODI limits etc., reduced the volatility in USD/INR and consequent to these measures Indian Rupee against USD gradually strengthened to ₹ 59.91 from ₹ 68.85. The gross investments increased from ₹ 5,268 crore at the end of last financial year to ₹ 5,955 crore. The G-sec market was also very volatile. The yield softened in the first quarter of the financial year. MANAGEMENT DISCUSSION AND ANALYSIS REPORT

A. Macro Economic Scenario

Global Economy

The IMF titled its survey in April, 2013 for World Economic outlook as Hopes, Realities, and Risks and expected the global economy to grow at 3.25% in 2013 and 4% in 2014. The survey of the year 2014 is titled as 'Recovery Strengthens; Remains Uneven', which reflects the present state of the world economy. Global activity has broadly strengthened and is expected to improve further in 2014-15, with much of the impetus for growth coming from advanced economies. In its latest semi-annual report on global economic outlook, the World Bank revised downward its forecast for global economic growth this year to 2.8% from the previous forecast of 3.2% in January, citing bad weather in the US, the slowdown of Chinese and Russian economies and turmoil in financial markets caused by the Ukraine crisis and the Iraq problems. The United States economic growth will reach only 2.1% this year, compared with 2.8% in the previous forecast, for the euro zone at 1.1%, for China at 7.6%, and 5.5% for India down from 6.2%. Average forecast for developed economies drops to 1.9%, down from 2.2% and that for developing economies to 4.8%, down from 5.3%.

The World Bank, however, predicts that the US economy will rebound to 3% next year and growth in the euro zone will still hit 1.8%, underscoring both are still on the road to recovery, though at a slower pace. Thanks to the ripple effect, developing economies will score 5.4% growth next year.

Most of the central banks in the developed economies which expanded their asset purchase program and kept their monetary policies in expansionary mode by maintaining exceptionally low interest rates in financial year 2012-13 in order to stimulate growth amid ongoing fiscal austerity have started reversing the process. However the low rate interest regime continues.

The tapering in the US Fed Reserve bond purchase programme which started in Jan 2014 has been anticipated and therefore factored in by the world financial market. The growth differential between advanced economies and emerging market has been narrowing while the inflation differential has been widening already, reports Reserve Bank of India in its financial stability report published in Dec 2013. The interplay dynamics between advanced economies and emerging markets may increase vulnerabilities of emerging markets. High global liquidity with persistently low rate of interest in advanced economies has been pushing asset prices in the emerging markets.

Financial markets across the world still remain vulnerable to news about the impending normalization of interest rates in some advanced economies though the level of vulnerability has scaled down compared to a year back when a statement by Fed Chief could wipe out more than a trillion dollar on a single day.

Indian Economy

The growth rate of Indian economy has been sliding and it reached below 5% growth for the year ended 31st March, 2014. The satisfactory monsoon and the absence of extreme climate resulted in agriculture sector witnessing a record production of several crops. The industrial production was stagnating for the whole year. The service sector growth was moderate. The major threat to the economy due to very high current account deficit was brought under control by introducing a slew of measures like curb on gold import, special scheme for mobilizing foreign currency deposit etc. This resulted in reducing the rupee volatility also.

Lead indicators point to continuing sluggishness in domestic economic activity in the first quarter of 2014-15. The outlook for agriculture is clouded as the meteorological department forecasts a delay in the onset of the south-west monsoon with a 60 per cent chance of the occurrence of El Nino. The ongoing contraction in the production of consumer durables and capital goods, coupled with moderation in corporate sales and non-oil non-gold imports, is indicative of continuing weakness in both consumption and investment demand. The decisive election result, together with improved sentiment should, however, create a conducive environment for comprehensive policy actions and a revival in aggregate demand as well as a gradual recovery of growth during the course of the year.

On the fiscal front, high fiscal deficit, which is another area of concern for the economy, efforts were taken to bring down the same. The deficit which was projected to be at 4.8% of the GDP for the year 2013-14 has been estimated to be 4.6%. Retail inflation measured by the consumer price index (CPI) increased for the second consecutive month in April, pushed up by a sharp spike in food inflation. CPI inflation excluding food and fuel has moderated gradually since September, 2013 although it is still elevated.

For the year 2013-14 as a whole, India's Current Account Deficit (CAD) narrowed sharply to 1.7 per cent of GDP, primarily on account of a decline in gold imports, although other non-oil imports also contracted with the weakening of domestic demand, with some pick-up in exports. In April, 2014, the trade deficit narrowed sharply due to resumption of export growth after two consecutive months of decline, and the ongoing shrinking of import demand. Robust inflows of portfolio investment, supported by foreign direct investment and external commercial borrowings, kept external financing conditions comfortable and helped to add reserves.

The Reserve Bank of India has felt it is appropriate to leave the policy rate unchanged, and to allow the disinflationary effects of rate increases undertaken during September, 2013 - January, 2014 to mitigate inflationary pressures in the economy. The Reserve Bank remains committed to keeping the economy on a disinflationary course, taking CPI inflation to 8 per cent by January, 2015 and 6 per cent by January, 2016.

B. Banking scenario

The Indian financial market is dominated by banks. The aggregate deposits for all scheduled commercial banks as of March 21, 2014 stood at ₹ 77.39 lakh crore and loans & advances was at ₹ 60.13 lakh crore registering a year on year growth 14.6% and 14.3% respectively. The credit deposit ratio stood at 77.69% as of March 21, 2014. A study of the growth in deposit and credit shows a positive bias in favour of the last quarter of the year.

The risks to the banking sector have further increased during the year. All major risk dimensions captured in the Banking Stability Indicator show increase in vulnerabilities in the banking sector. Banking Stability Measures, based on co-movements in banks' equity prices, also indicate that the distress dependencies within the banking system have risen during this period.

Asset quality continues to be a major concern for Scheduled Commercial Banks (SCBs). The key aspects of deterioration in asset quality are: A rising trend in Risk Weighted Assets (RWA) to total assets along with declining trend in Coefficient of Variation (CV) indicates that the overall rise in proportion of risky assets in the total assets of SCBs is becoming more broad-based. The Gross Non-performing Assets ratios of SCBs as well as their restructured standard advances ratio have increased. Therefore, the total stressed advances ratio rose significantly to 10.2 per cent of total advances as at end September, 2013 from 9.2 per cent of March, 2013.

Macro stress tests on credit risk suggest that if the adverse macroeconomic conditions persist, the credit quality of commercial banks could deteriorate further.

However, under improved conditions, the present trend in credit quality may reverse during the second half of 2014-15 with the GNPA ratio expected to rise initially to around 4.6 per cent by September, 2014 from 4.2 per cent as at end September, 2013, which may subsequently improve to 4.4 per cent by March, 2015.

Delay in tapering by the Fed following its initial announcement in May, 2013, offered time for India and other EMDEs to undertake measures to improve the resilience of their economies to withstand the effects of inevitable tapering. India took a series of co-ordinated measures which seem to have worked well.

The, liquidity conditions improved significantly in April and May, 2014. The average daily access to liquidity from the LAF and term repos during this period has been close to 1.0 per cent of NDTL. The Reserve Bank has promised to continue to monitor liquidity conditions and will actively manage liquidity to ensure adequate flow of credit to the productive sectors.

The outlook for Indian economy for the FY 15 is expected to show mild improvement and estimated to grow at 5.5%. The average CPI inflation is likely to moderate. The Government has also budgeted for a reduction in fiscal deficit to 4.2% of GDP in FY 15. The election results installing a strong single party government after a gap nearly 30 years should augur well for the economy.

The monsoon is expected to play spoil sport and is estimated to be in deficit zone with the threat of Elnino. On the CAD front the position is comfortable with rupee having gained more than 10% from the all time low, has stabilized. The geo political turmoil in the world may cause a higher crude price adversely affecting the economy.

Your Bank has an ambitious plan of adding 75 more branches to reach the five hundred mark and 300 more ATMs to garner a higher percentage of growth in the coming years.

3.3.1 - Qualitative Disclosure:

A. Structure and Organisation for Management of risk in derivatives trading

Operations in the Treasury are segregated into three functional areas, namely Front office, Mid-office and Back-office, equipped with necessary infrastructure and trained officers, whose responsibilities are well defined. The Bank enters into plain vanilla forward contracts only to backup/cover customer transactions as also for proprietary trading purpose.

The Integrated Treasury policy of the Bank clearly lays down the scope of usages, approval process as also the limits like the open position limits, deal size limits and stop loss limits for trading.

The Mid-Office is handled by Risk Management Department. Daily report is generated by Risk Management department for appraisal of the risk profile to the senior management for Asset and Liability Management.

B. Scope and nature of risk measurement, risk reporting and risk monitoring systems

Outstanding forward contracts are monitored by Risk Management Department against the limits (counterparty, stop loss, Open Position, VaR, Aggregate Gap) fixed by the Board and approved by RBI (wherever applicable) and exceedings, if any, are reported to the Board for ratification.

C. Policies for hedging and/or mitigating and strategies and processes for monitoring the continuing effectiveness of hedges/mitigants

The Bank's policy lays down that the transactions with the corporate clients are to be undertaken only after the inherent credit exposures are quantified and approved for customer appropriateness and suitability and necessary documents like ISDA agreements etc. are duly executed. The Bank adopts Current Exposure Method for monitoring the credit exposures.

While sanctioning the limits, the competent authority stipulates condition of obtaining collaterals/margin as deemed appropriate. The derivative limits are reviewed periodically along with other credit limits.

D. Accounting policy for recording the hedge and non-hedge transactions, recognition of Income premiums and discounts, valuation of outstanding contracts, provisioning, collateral and credit risk mitigation

Valuation of outstanding forward contracts are done as per FEDAI guidelines in force. Marked to market profit & loss are taken to Profit & Loss account. MTM profit & loss calculated as per Current Exposure method are taken into account while sanctioning forward contract limits to customers and collaterals/cash margins are prescribed for credit and market risks.

The Bank undertakes foreign exchange forward contracts for its customers and hedges them with other banks. The credit exposure on account of forward contracts is also considered while arriving at the total exposure of each customer/borrower. The Bank also deals with other banks in proprietary trading duly adhering to risk limits permitted by RBI, set in the policy and is monitored by mid-office. The Marked to Market values are monitored on monthly basis for foreign exchange forward contracts. The credit equivalent is computed under current exposure method. The operations are conducted in terms of the policy guidelines issued by Reserve Bank of India from time to time and as approved by the Board of the Bank.

CAPITAL ADEQUACY

Qualitative Disclosures:
A. A summary discussion of the Bank's approach to assessing the adequacy of its capital to support current and future activities.

In order to strengthen the capital base of banks in India, the Reserve Bank of India in April 1992 introduced capital adequacy measures in banks, based on the capital adequacy framework (Basel I) issued by Basel Committee on Banking Supervision (BCBS). Initially, the framework addressed capital for credit risk, which was subsequently amended to include capital for market risk as well. The Bank has been compliant with regard to maintenance of minimum capital for credit and market risks.

Subsequently, the BCBS has released the "International Convergence of Capital Measurement and Capital Standards: A Revised Framework" (popularly known as Basel II document) on June 26, 2004. Reserve Bank of India has issued final guidelines on April 27, 2007 for implementation of the New Capital Adequacy (Basel II) Framework.

In line with the RBI guidelines, the Bank has successfully migrated to the revised framework (Basel-II) from 31.03.2009. The Bank has continued the Parallel run of Basel II framework continuously tracking the exposures and studied the impact on Bank's Capital to Risk weighted Assets Ratio (CRAR) on a quarterly basis.

Reserve Bank of India issued Guidelines based on the Basel III reforms on capital regulation during May 2012, to the extent applicable to banks operating in India. The Basel III capital regulation has been implemented from April 01, 2013 in India in phases and it will be fully implemented as on March 31, 2019. RBI issued detailed Guidelines on Composition of Capital Disclosure Requirements on May 28, 2013. The Basel III Capital Regulations have been consolidated in Master Circular - Basel III Capital Regulations vide circular No.DBOD. No.BP.BC. 2/21.06.201 / 2013-14 dated July 1, 2013.

Under the Basel II framework, the total regulatory capital comprises of Tier I (core capital) and Tier 2 capital (supplementary capital). In order to improve the quality of regulatory capital, the capital will predominantly consist of Common Equity Tier1 (CET1) under Basel III. Non-equity Tier 1 and Tier 2 capital would continue to form part of regulatory capital subject to eligibility criteria as laid down in Basel III. The Basel III capital regulations continue to be based on three-mutually reinforcing Pillars, viz. Minimum Capital Requirements (Pillar 1), Supervisory Review of Capital Adequacy (Pillar 2) and Market Discipline (Pillar 3) of the Basel II Capital Adequacy framework.

The Basel-III norms mainly seek to:

- Raise the quality of capital to ensure that the banks are capable to absorb losses on both as going concern and as gone concern basis,

- Increase the risk coverage of the capital framework
- Introduce leverage ratio to serve as a backstop to the risk-based capital measure
- Raise the standards for the supervisory review process and public disclosures etc.

The macro prudential aspects of Basel III are largely enshrined in the capital buffers. Both the buffers i.e. the capital conservation buffer and the countercyclical buffer are intended to protect the banking sector from stressed situations and business cycles.

Minimum capital requirements under Basel-III:

Under the Basel III Capital Regulations, Banks are required to maintain a minimum Pillar 1 Capital (Tier-I + Tier-II) to Risk-weighted Assets Ratio (CRAR) of 9% on an on-going basis (other than capital conservation buffer and countercyclical capital buffer etc.) Besides this minimum capital requirements, Basel III also provides for creation of capital conservation buffer (CCB). The CCB requirements are to be implemented from March 31, 2016 in phases and are to be fully implemented by March 31, 2019 to the extent of 2.5% of Risk weighted Assets.

The total regulatory capital fund under Basel- III norms will consist of the sum of the following categories and banks are required to maintain a minimum of 11.5% of Risk Weighted Assets (9% + 2.5%) by March 2019 with the phase in requirements under CCB from March 2016.

- Tier 1 Capital comprises of:-
 - Common Equity Tier 1 capital (with a minimum of 5.00% as on 31.03.2014 and 5.50% from 31.03.2015)
 - Additional Tier 1 capital
 - Total Tier 1 capital of minimum 6.50% as on 31.03.2014 and 7% from 31.03.2015
- Tier 2 Capital.
 - Total Tier 1 + Tier 2 should be more than 9%
- Capital Conservation Buffer (CCB). (with a minimum of 0.625% from 31.03.2016 and 2.50% from 31.03.2019)
 - Total capital including CCB should be above 11.5% from 31.03.2019.
(For the position as on 31.03.2014, total minimum capital requirement is 9%)

B. The Bank's approach in assessment of capital adequacy

The Bank is following standardized approach, Standardized Duration approach and Basic Indicator approach for measurement of capital charge in respect of credit risk, market risk and operational risk respectively. Besides computing CRAR under the Pillar I requirement, the Bank also periodically undertakes stress testing in various risk areas to assess the impact of stressed scenario or plausible events on asset quality, liquidity, profitability and capital adequacy. The bank conducts Internal Capital Adequacy Assessment Process (ICAAP) on annual basis to assess the sufficiency of its capital funds to cover the risks specified under Pillar- II of Basel guidelines. The adequacy of Bank's capital funds to meet the future business growth is also assessed in the ICAAP document.

2. Risk Exposure and Assessment

Risk is an integral part of banking business in an ever dynamic environment, which is undergoing radical changes both on the technology front and product offerings. The main risks faced by the bank are credit risk, market risk and operational risk. The bank aims to achieve an optimum balance between risk and return to maximize shareholder value. The relevant information on the various categories of risks faced by the bank is given in the ensuing sections. This information is intended to give market participants a better idea on the risk profile and risk management practices of the bank.

The Bank has a comprehensive risk management system in order to address various risks and has set up an Integrated Risk Management Department (RMD), which is independent of operational departments. Bank has a Risk Management Committee of Board functioning at apex level for formulating, implementing and reviewing bank's risk management measures pertaining to credit, market and operational risks. Apart from the Risk Management Committee of the Board at apex level, the Bank has a strong Bank-wide risk management structure comprising of Risk Management Committee of Executives (RMCE) assisted by Asset Liability Management Committee (ALCO), Credit Risk Management Committee (CRMC) and Operational Risk Management Committee (ORMC) at senior management level. Credit Risk Management Committee deals with credit policies and procedures, Asset Liability Management Committee deals with Asset Liability Management (ALM) and Investment Policy of the Bank and Operational Risk Management Committee formulates policies and procedures for managing operational risks.

The Bank has formulated the required policies such as Integrated Risk Management Policy, Loan Policy, Credit Risk Management Policy, ALM Policy, Treasury and Forex Policy of Risk Management Policy, Inspection and Audit policies, KYC policy, Risk Based Internal Audit Policy, Stress Testing Policy, Disclosure Policy, ICAAP policy and Credit Risk Mitigation & Collateral Management Policy, Risk Rating and Pricing policy, etc for mitigation the risk in various areas and monitoring the same.

The structure and organization of Risk Management functions of the bank is as follows:

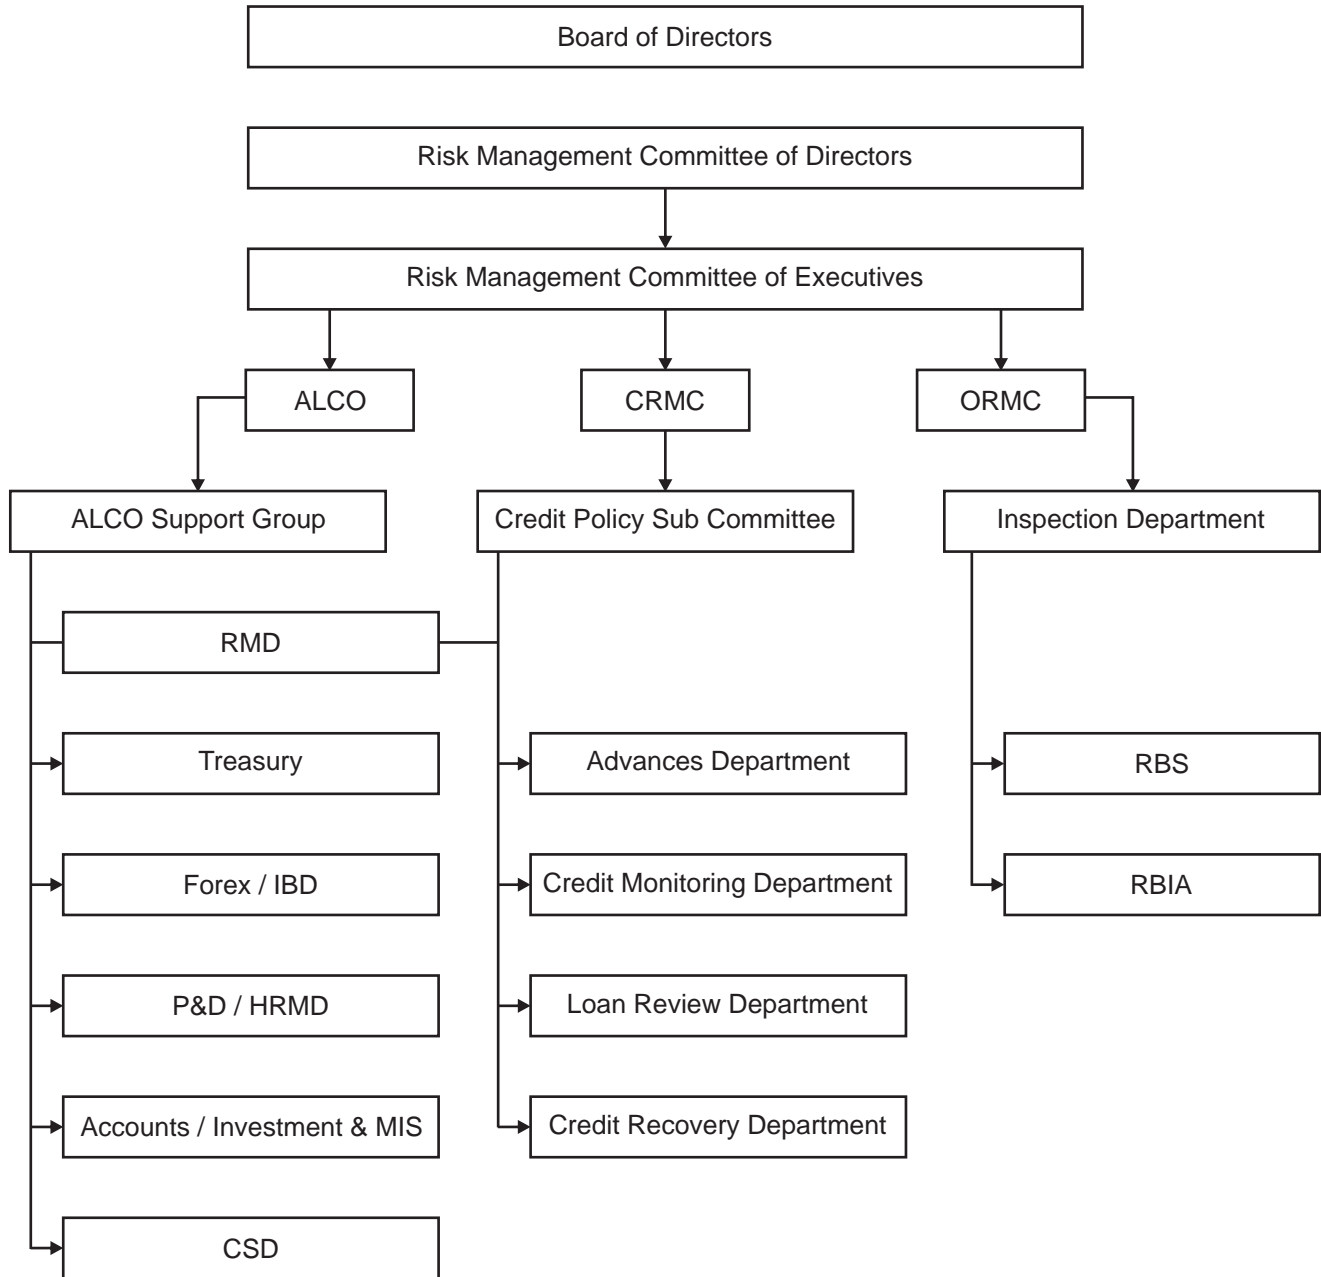

Table DF - 3
CREDIT RISK: GENERAL DISCLOSURES
Credit Risk:

Credit Risk is a possibility of losses associated with diminution in the credit quality of borrowers or counterparties. In a bank's portfolio, Credit Risk arises mostly from lending activities of the bank, when a borrower is unable to meet its financial obligations emanating from potential changes in the credit quality / worthiness of the borrowers or counterparties.

Credit Risk Management encompasses a host of management techniques, which help the banks in mitigating the adverse impacts of credit risk. The objective of the Credit Risk Management is to identify, measure, monitor and control credit risk by adopting suitable methodology.

The Bank has formulated Loan Policy which stipulates various prudential norms, bench marks, guidelines for sanctioning of credits and recovery of the same. The Bank has also formulated a separate Credit Risk Management Policy, besides a Policy on Credit Risk Mitigation and Collateral Management.

Credit Risk is assessed by a robust internal credit risk rating system. Credit Risk Rating is the process wherein the merits and demerits of a borrower are captured and assigned with scorings, which enables the Bank to take a view on the acceptability or otherwise of any credit proposal.

Credit Risk Management Policy:

The Bank has put in place a well-structured Credit Risk Management Policy duly approved by the Board. The Policy document defines organisation structure, role and responsibilities and the processes whereby the Credit Risks carried by the Bank can be identified, quantified and managed. Credit Risk is monitored on a bank wide basis and the compliance with regard to the risk limits approved by the Credit Risk Management Committee(CRMC) / Board is ensured.

The Bank adopts the definition of 'past due' and 'impaired credits' (for accounting purposes) as defined by Reserve Bank of India under Income Recognition, Asset Classification and provisioning (IRAC) norms (vide RBI Master Circular dated July 01, 2013).

CREDIT RISK: DISCLOSURES FOR PORTFOLIO SUBJECT TO THE STANDARDISED APPROACH
Qualitative Disclosures:

The Bank is using the services of the External Credit Rating Agencies approved by Reserve Bank of India, namely a) CRISIL, b) ICRA, c) CARE, d) FITCH/India Ratings, e) Brickwork and f) SMERA ratings to facilitate the corporate borrower customers who enjoy credit facilities above ₹ 5.00 crore to solicit the ratings. The corporates which are yet to get the approved ratings from these rating agencies, are treated as 'unrated'.

The Bank computes risk weight on the basis of external rating assigned, both Long Term and Short Term, for the facilities availed by the borrower. The external ratings assigned are generally facility specific. The Bank follows the below mentioned procedures as laid down in the Basel III guidelines for usage of external ratings:

- Rating assigned by one rating agency is used for all the types of claims on the borrowing entity.
- Long term ratings are used for facilities with contractual maturity of one year & above.
- Short term ratings are generally applied for facilities with contractual maturity of less than one year.

Quantitative Disclosures:

TABLE DF - 9
INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)
Qualitative Disclosures:

Interest rate risk is the risk where changes in the market interest rates might affect a bank's financial condition. Changes in interest rates affect both the current earnings (earnings perspective) as also the net-worth of the Bank (economic value perspective). The risk from earnings perspective can be measured as impact in the Net Interest Income (NII) or Net Interest Margin (NIM). Similarly, the risk from economic value perspective can be measured as drop in the Economic value of Equity (EVE).

The impact on income (earning perspective) is measured through use of Gap Analysis by applying notional rate shock up to 200 bps as prescribed.

For the calculation of impact on earnings, the Traditional Gap is taken from the Rate Sensitivity statement and based on the remaining period from the mid point of a particular bucket, the impact for change in interest rates up to 200 bps is arrived at for one year time horizon.

The Bank has adopted Duration Gap Analysis for assessing the impact (as a percentage) on the Economic Value of Equity (Economic Value Perspective) by applying a notional interest rate shock of 200 bps. As per the draft guidelines issued by RBI DBOD.No. BP. 7/21.04.098/ 2005-06 dated April 17, 2006, the Bank calculates Modified Duration Gap on Assets & Liabilities and arrive at the impact on Economic Value of Equity. On November 04, 2010, RBI issued a circular on Interest Rate Risk using Duration Gap Analysis and these guidelines have also been taken into account while calculating IRRBB. The Bank is calculating IRRBB on a quarterly basis.

Quantitative Disclosures:

a) The impact of change in Interest Rate i.e. Earnings at Risk for 200 bps interest rate shock as on 31.03.2014 is ₹ 79.90 crore.

b) The impact of change in market value of Equity for an interest rate shock of 200 bps as on 31.03.2014 is 7.80%.

TABLE DF - 10
GENERAL DISCLOSURES FOR EXPOSURES RELATED TO COUNTERPARTY CREDIT RISK

Counterparty Credit Risk (CCR) is the risk that a counter party to a transaction could default before the final settlement of the transaction cash flows. Unlike a firm's exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss to either parties.

Counterparty credit risk in case of derivative contracts arises from the forward contracts. The subsequent credit risk exposures depend on the value of underlying market factors (e.g., interest rates and foreign exchange rates), which can be volatile and uncertain in nature. The Bank does not enter into derivative transactions other than forward contracts.

Credit exposures on forward contracts

The Bank enters into the forward contracts in the normal course of business for proprietary trading and arbitrage purposes, as well as for our own risk management needs, including mitigation of interest rate and foreign currency risk. Derivative exposures are calculated according to the current exposures method.

Counterparty Credit exposure as on March 31, 2014

(₹ in crore)

Nature	Notional Amount	Potential Exposure @2%	Current exposure	Total credit exposure
Forward contracts	3661.48	69.15	98.31	167.46

In terms of RBI circular dated 31.12.2013, the credit valuation adjustment risk capital charge would be effective from 01.04.2014, and accordingly CVA capital charge has not been computed for the position as on 31.03.2014. However, the capital requirements for the Bank's exposure to QCCP has been computed for the exposure to Clearing Corporation of India Ltd (CCIL) as on 31.03.2014 amounting to ₹ 235.95 crore with a Risk Weighted Assets of ₹ 43.62 crore which is forming part of the Credit Risk Total amount as per RBI guidelines dated 02.07.2013.
