MANAGEMENT DISCUSSION AND ANALYSIS REPORT

Macro Economic Scenario

Indian Economy

In the Financial year 2014-15 Indian economy started on a positive note with significant improvement in the markets and business sentiments after conclusion of the general election in which a single party majority government was formed after nearly three decades of coalition rule.

Gradual improvement in governance complemented by supportive global commodity prices and a sharp decline in crude prices resulted in moderate increase in economic output. In terms of RBI estimates the GDP growth for FY 2015-16 would be 7.6% as compared to FY 2014-15 figures of 7.4%.

As per Central Statistical Organization advance estimates, barring agriculture, mining and trade, transport and communication services, all other sectors are expected to show improvement in performance.

During FY 2014-15 Inflation as measured by the CPI (Consumer Price Index) showed a substantial decline, with average CPI inflation falling to 6% in FY 2014-15 after averaging close to 10% over a period of six years between FY 2008-09 till FY 2013-14. Sharp drop in crude oil prices helped in moderation of fuel inflation despite hikes in excise duty at regular intervals limiting the pass through of lower global oil prices to retail consumers. Core inflation remained below 5% since November 2014 due to RBI's strong anti-inflationary stance and declining trend in fiscal deficit.

The Wholesale Price Index (WPI) remained in the negative territory since November 2014 and has averaged at 2.1% during FY 2014-15 vis-a-vis 6.0% in FY 2013-14. India's external sector vulnerability saw improvement after significant compression in current account deficit in the second half of FY 2013-14. The current account deficit (CAD) is expected to improve towards 1.3% of GDP in FY 2014-15 as per Economic Survey presented by the Finance Minister in February 2015 on the back of slide in global commodity prices since June 2014.

The quality of fiscal adjustment remained a concern even as the government is expected to meet the deadline fiscal deficit target of 4.1% of GDP in FY 2014-15. It is expected that Government may compensate the shortfall in gross tax revenue and disinvestment receipts by pruning its capital expenditure.

The Indian Rupee traded in a band of 58.46 - 63.68 against US \$ during the financial year 2014-15. After the announcement of general election results in May 2014, inflows in both equity and debt instruments were seen to be supportive as the currency remained below ₹ 60 level to dollar. Rupee started to depreciate in a very gradual fashion closing the financial year at ₹ 62.50. Trade Deficit saw mild compression due to sizable drop in International Crude prices despite marginal depreciation in Indian Rupee.

On the monetary policy front, after increasing repo rate by 25 basis points to 8% in January 2014, the RBI maintained status quo till December 2014. Repo rate was lowered by 25 basis points to 7.75% in January 2015 on account of CPI inflation trajectory turning out to be lower than RBI's estimates followed by further 25 basis points cut to 7.50% in March 2015 and another reduction of 25 basis points to 7.25% was effect on 2nd June 2015.

Liquidity conditions remained in the deficit during FY 2014-15. Liquidity deficit (after adjusting for daily CRR maintenance) deteriorated from ₹ 1,14,095 crore in end April 2014 to ₹ 1,26,075 crore in end July 2014 on account of seasonal factors like increase in currency circulation. RBI had infused ₹ 2,45,527 crore through its various foreign exchange operations between April 2014 and January 2015. During the month of March 2015 liquidity tightened as the government curbed expenditure to meet FY 2014-15 target for fiscal deficit and also on account of the seasonal tightness coming from Q4 advance tax outflow from the banking system. The year end liquidity deficit was ₹ 1,11,869 crore as of 31st March 2015. However, RBI's active liquidity support through LAF helped the money market rates to remain soft.

In view of the general economic slowdown in the environment, especially in the Banking sector, the asset quality of almost all banks remained under stress and your Bank managed to overcome the challenging environment by ongoing efforts for strong recovery measures throughout the financial year.

Bank credit has remained subdued for the entire part of FY 15 and the transmission on account of rate cuts by RBI is being seen gradually. The Indian economy is on the threshold of major transformation, with expectations of policy initiatives being implemented. Positive sentiments, improved consumer confidence and more controlled inflation may boost the economic growth. The further impetus to growth depends on higher spending on infrastructure, speedy implementation of projects and continuation of reforms.

Global Economy

How the economy behaved in the last year in different parts of the world is discussed hereunder.

Though the US economy is expected to clock a growth of 2% during FY 2015 the growth was weak partly because of US dollar appreciation, but is expected to gain strength. With prospects of growth looking bright, Federal Reserve withdrew quantitative easing in a phased manner and market expects atleast one rate hike during 2015.

The Euro area growth is expected to be around 1.50% its best since 2011 on account of boost in demand from lower crude prices and the depreciation of the euro as well as easing financial and credit conditions following the commencement of quantitative easing.

With the impact of the consumption tax increase warning, the growth turned positive in Japan in Q4 of FY 2015 at 3.90% with upbeat consumer confidence, pickup in exports and strong numbers coming from business investments.

China's economy grew at 7.40%, the slowest pace in 24 years, falling short of government expectation since 1998, amidst financial fragilities and macroeconomic imbalances. This will have regional and global ramifications, although the softness in international commodity prices is providing some offset for net importers while adversely impacting net exporters.

Greece's default in its payment obligation to IMF looms large as implementation of crucial structural reforms lags behind with spending cuts and hike in tax rates not yielding the desired results to pay off the massive debt.

Against this scenario of world economies the Global economic growth in FY 2015 was a modest 3.30% as per the IMF estimates. Moderate and uneven global recovery was emerging with economies being buffeted (or supported) by currency fluctuations and commodity prices.

Global growth is likely to firm up through 2015 and 2016, supported by stronger recovery in the advanced economies (AEs) and soft energy prices. Downside risks mainly emanate from the slowdown in China, geopolitical risks surrounding oil prices and the uneven effects of currency and commodity price movements.

Global financial markets have also been boosted by expectations of normalisation of US monetary policy being pushed back into late 2015, monetary policy stances turning highly accommodative in other Advanced Economies and several emerging market economies (EMEs) easing policy rates to address growth concerns. Long-term yields have declined to all-time lows on weak inflation expectations, compression of term premiums and the safe haven allure of US Treasuries. Ultra low interest rates and reduction in risk premia have raised most asset prices to record highs, and have pushed investors to riskier assets such as equity and lower rated debt instruments. Exchange rates have experienced large and volatile movements, with the US dollar strengthening against most currencies. Nevertheless, with high portfolio flows to EMEs, risks from sudden shifts in market sentiment have increased.

Overall, global growth is projected to reach 3.50% and 3.80% in 2015 and 2016, respectively, in line with the projections in the January 2015 World Economic Outlook as reported by IMF in the Update published in April 2015.

Business Strategy and Approach to Business

As per the Second Bi-monthly monetary policy statement 2015-16 issued by RBI, the repo rate under the liquidity adjustment facility (LAF) was reduced by 25 bps from 7.50% to 7.25%, CRR (Cash Reserve Ratio) of Scheduled Banks remained unchanged at 4% of net demand and time liabilities (NDTL) and the reverse repo rate under the LAF stood adjusted to 6.25% and the marginal standing facility (MSF) rate and the Bank rate to 8.25%.

As a result of liquidity conditions easing in April 2015 after the tightness in the second half of March 2015 on account of advance tax outflows, the Reserve Bank's liquidity management operations were reversed.

The main focus of RBI was to curtail inflation and facilitate growth in the economy by introducing various measures and the recent rate cut in this perspective was to encourage banks to reduce lending rate to the borrowers.

3.3 Disclosures on risk exposure in derivatives

3.3.1 - Qualitative Disclosure:

A. Structure and Organisation for Management of risk in derivatives trading

Operations in the Treasury are segregated into three functional areas, namely Front office, Mid-office and Back-office, equipped with necessary infrastructure and trained officers, whose responsibilities are well defined. The Bank enters into plain vanilla forward contracts only to backup / cover customer transactions as also for proprietary trading purpose.

The Integrated Treasury policy of the Bank clearly lays down the scope of usages, approval process as also the limits like the open position limits, deal size limits and stop loss limits for trading.

The Mid-Office is handled by Risk Management Department. Daily report is generated by Risk Management department for appraisal of the risk profile to the senior management for Asset and Liability Management.

B. Scope and nature of risk measurement, risk reporting and risk monitoring systems

Outstanding forward contracts are monitored by Risk Management Department against the limits (Counterparty, Stop loss, Open Position, VaR, Aggregate Gap) fixed by the Board and approved by RBI (wherever applicable) and exceedings, if any, are reported to the Board for ratification.

C. Policies for hedging and / or mitigating and strategies and processes for monitoring the continuing effectiveness of hedges / mitigants

The Bank's policy lays down that the transactions with the corporate clients are to be undertaken only after the inherent credit exposures are quantified and approved for customer appropriateness and suitability and necessary documents like ISDA agreements etc. are duly executed. The Bank adopts Current Exposure Method for monitoring the credit exposures.

While sanctioning the limits, the competent authority stipulates condition of obtaining collaterals / margin as deemed appropriate. The derivative limits are reviewed periodically along with other credit limits.

D. Accounting policy for recording the hedge and non-hedge transactions, recognition of Income premiums and discounts, valuation of outstanding contracts, provisioning, collateral and credit risk mitigation

Valuation of outstanding forward contracts are done as per FEDAI guidelines in force. Marked to market profit & loss are taken to Profit & Loss account. MTM profit & loss calculated as per Current Exposure method are taken into account while sanctioning forward contract limits to customers and collaterals / cash margins are prescribed for credit and market risks.

The Bank undertakes foreign exchange forward contracts for its customers and hedges them with other banks. The credit exposure on account of forward contracts is also considered while arriving at the total exposure of each customer / borrower. The Bank also deals with other banks in proprietary trading duly adhering to risk limits permitted by RBI, set in the policy and is monitored by mid-office. The Marked to Market values are monitored on monthly basis for foreign exchange forward contracts. The credit equivalent is computed under current exposure method. The operations are conducted in terms of the policy guidelines issued by Reserve Bank of India from time to time and as approved by the Board of the Bank.

11.2 Quality disclosure around LCR

Liquidity Coverage Ratio has been prescribed by RBI based on LCR Standards published by BCBS. The LCR promotes short term resilience of banks to potential liquidity disruptions by ensuring that they have sufficient high quality liquid assets (HQLAs) to survive an acute stress scenario in the immediate 30 days period.

LCR is defined as :

$$\frac{\text{Stock of High Quality Liquid Assets (HQLA)}}{\text{Total net cash outflows over the next 30 calendar days}} \geq 100\%$$

The LCR standard aims to ensure that a bank maintains an adequate level of unencumbered HQLAs that can be converted into cash to meet its liquidity needs for the next 30 days period under a significantly severe liquidity stress scenario specified by RBI w.e.f 1st January, 2015.

While The BCBS specifies a ratio of minimum 100 % for all banks, RBI has made a graduated increase from 60 % to attain 100 % by 2019 as given in the schedule below :

Particulars	January 1, 2015	January 1, 2016	January 1, 2017	January 1, 2018	January 1, 2019
Minimum LCR	60%	70%	80%	90%	100%

Composition of High Quality Liquid Assets(HQLA):

- Cash in hand
- Excess CRR balance as on that particular day
- Excess Government Securities in excess of minimum SLR requirement
- Government Securities within the mandatory SLR requirement to the extent allowed by RBI under MSF (presently to the extent of 2% of NDTL as allowed for MSF)
- Facility to avail liquidity for liquidity coverage ratio at 5% of NDTL
- Repo borrowings should be deducted
- AAA rated bonds and AA- & above rated bonds and adding marketable securities representing claims guaranteed by sovereigns having risk weights higher than 20% but not higher than 50%
- Common equity shares not issued by the bank and included in NSE CNX Nifty and / or S & P BSE Sensex indices.

As regards the concentration of funding sources, the term "deposits from public" is the major source for the bank.

The currency mismatch in respect of foreign currency assets and liabilities is very minimal.

12.1 Income Tax

Provision for income tax in the current year is consistent with earlier years after considering various judicial decisions on certain disputed issues.

No provision is considered necessary for earlier years towards disputed tax liability since for the tax claim of ₹ 323 crore (under Appeal) {previous year - ₹ 249 crore}, the Bank has to its support, appellate orders decided in its favour on similar issues.

12.2 Inter Branch Reconciliation

Reconciliation of Central Office accounts maintained by branches has been completed upto 31st March, 2015. Adjustment of outstanding entries in Inter Branch Reimbursement account, Clearing Difference Receivable, Funds in Transit and other similar accounts is in progress. In the opinion of the management, there is no consequential material impact.

12.3 Employees Stock Option

The bank has allotted 71,91,961 shares during the year to its eligible employees who have exercised their options granted under ESOS of the Bank.

12.4 The Bank issued 4,66,35,576 shares having face value of ₹1/- each at a premium of ₹ 74.05 as qualified institutions placement and the expenses of ₹ 8.77 crore were amortized against the share premium received.

12.5 In accordance with the RBI circular DBOD. No. BPBC.2/21.06.201/2013-14 dated 1st July, 2013, banks are required to make half yearly Pillar III disclosures under Basel III capital requirements with effect from 30th September, 2013. The disclosures have been made available on the Bank's web site.

12.6 The Bank has earmarked ₹ 6.32 crore towards CSR during the year 2014-15. Out of which ₹ 3.54 crore has been spent (accounted under Schedule - 16 : Operating Expenses - XII Other Expenditure) and the balance will be disbursed based on the works completed.

12.7 There are no dues to Micro and Small Enterprises calling for disclosure as at 31st March, 2015 as per the records available.

12.8 Previous year's figures have been regrouped wherever necessary to conform to the current year classification.

CAPITAL ADEQUACY
Qualitative Disclosures:
A. A summary discussion of the Bank's approach to assessing the adequacy of its capital to support current and future activities.

In order to strengthen the capital base of banks in India, the Reserve Bank of India in April 1992 introduced capital adequacy measures in banks, based on the capital adequacy framework (Basel I) issued by Basel Committee on Banking Supervision (BCBS). Initially, the framework addressed capital for credit risk, which was subsequently amended to include capital for market risk as well. The Bank has been compliant with regard to maintenance of minimum capital for credit and market risks.

Subsequently, the BCBS has released the "International Convergence of Capital Measurement and Capital Standards: A Revised Framework" (popularly known as Basel II document) on 26th June, 2004. Reserve Bank of India has issued final guidelines on 27th April, 2007 for implementation of the New Capital Adequacy (Basel II) Framework.

In line with the RBI guidelines, the Bank has successfully migrated to the revised framework (Basel-II) from 31st March, 2009. The Bank has continued the Parallel run of Basel II framework continuously tracking the exposures and studied the impact on Bank's Capital to Risk weighted Assets Ratio (CRAR) on a quarterly basis.

Reserve Bank of India issued Guidelines based on the Basel III reforms on capital regulation during May 2012, to the extent applicable to banks operating in India. The Basel III capital regulation has been implemented from 1st April, 2013 in India in phases and it was decided originally to implement fully as on 31st March, 2018. RBI issued detailed Guidelines on Composition of Capital Disclosure Requirements on 28th May, 2013. Another circular on "Implementation of Basel III Capital Regulations in India - Capital Planning" has been issued by RBI on 27th March, 2014. Accordingly, the transitional period for full implementation of Basel III Capital Regulations in India is extended upto 31st March, 2019, instead of as on 31st March, 2018. The Basel III Capital Regulations have been consolidated in Master Circular - Basel III Capital Regulations vide circular No. DBOD.No.BP.BC.6/21.06.201/2014-15 dated 1st July, 2014.

Under the Basel II framework, the total regulatory capital comprises of Tier I (core capital) and Tier 2 capital (supplementary capital). In order to improve the quality of regulatory capital, the capital will predominantly consist of Common Equity Tier1 (CET1) under Basel III. Non-equity Tier 1 and Tier 2 capital would continue to form part of regulatory capital subject to eligibility criteria as laid down in Basel III. The Basel III capital regulations continue to be based on three-mutually reinforcing Pillars, viz. Minimum Capital Requirements (Pillar 1), Supervisory Review of Capital Adequacy (Pillar 2) and Market Discipline (Pillar 3) of the Basel II Capital Adequacy framework.

The Basel-III norms mainly seek to:

- Raise the quality of capital to ensure that the banks are capable to absorb losses on both as going concern and as gone concern basis,

- Increase the risk coverage of the capital framework
- Introduce leverage ratio to serve as a backstop to the risk-based capital measure
- Raise the standards for the supervisory review process and public disclosures etc.

The macro prudential aspects of Basel III are largely enshrined in the capital buffers. Both the buffers i.e. the capital conservation buffer and the countercyclical buffer are intended to protect the banking sector from stressed situations and business cycles.

Minimum capital requirements under Basel-III

Under the Basel III Capital Regulations, Banks are required to maintain a minimum Pillar 1 Capital (Tier - I + Tier - II) to Risk Weighted Assets Ratio (CRAR) of 9% on an on-going basis (other than capital conservation buffer and countercyclical capital buffer etc.) Besides these minimum capital requirements, Basel III also provides for creation of capital conservation buffer (CCB). The CCB requirements are to be implemented from 31st March, 2016 in phases and are to be fully implemented by 31st March, 2019 to the extent of 2.5% of Risk Weighted Assets.

The total regulatory capital fund under Basel- III norms will consist of the sum of the following categories and banks are required to maintain 11.5% of Risk Weighted Assets (9% + 2.5%) by March 2019 with the phase in requirements under CCB from March 2016.

- Tier 1 Capital comprises of:-
 - Common Equity Tier 1 capital (with a minimum of 5.5%)
 - Additional Tier 1 capital
 - Total Tier 1 capital of minimum 7%
- Tier 2 Capital.
 - Total Tier 1 + Tier 2 should be more than 9%
- Capital Conservation Buffer (CCB). (with a minimum of 2.5%)
 - Total capital including CCB should be 11.5%

B. The Bank's approach in assessment of capital adequacy

The Bank is following standardized approach, Standardized Duration approach and Basic Indicator approach for measurement of capital charge in respect of credit risk, market risk and operational risk respectively. Besides computing CRAR under the Pillar I requirement, the Bank also periodically undertakes stress testing in various risk areas to assess the impact of stressed scenario or plausible events on asset quality, liquidity, profitability and capital adequacy. The bank conducts Internal Capital Adequacy Assessment Process (ICAAP) on annual basis to assess the sufficiency of its capital funds to cover the risks specified under Pillar-II of Basel guidelines. The adequacy of Bank's capital funds to meet the future business growth is also assessed in the ICAAP document.

2. Risk Exposure and Assessment

Risk is an integral part of banking business in an ever dynamic environment, which is undergoing radical changes both on the technology front and product offerings. The main risks faced by the bank are credit risk, market risk and operational risk. The bank aims to achieve an optimum balance between risk and return to maximize shareholder value. The relevant information on the various categories of risks faced by the bank is given in the ensuing sections. This information is intended to give market participants a better idea on the risk profile and risk management practices of the bank.

The Bank has a comprehensive risk management system in order to address various risks and has set up an Integrated Risk Management Department (RMD), which is independent of operational departments. Bank has a Risk Management Committee of Board functioning at apex level for formulating, implementing and reviewing bank's risk management measures pertaining to credit, market and operational risks. Apart from the Risk Management Committee of the Board at apex level, the Bank has a strong Bank-wide risk management structure comprising of Risk Management Committee of Executives (RMCE) assisted by Asset Liability Management Committee (ALCO), Credit Risk Management Committee (CRMC) and Operational Risk Management Committee (ORMC) at senior management level. The structure and organization of Risk Management functions of the bank is as follows:

CREDIT RISK: GENERAL DISCLOSURES
Credit Risk

Credit Risk is a possibility of losses associated with diminution in the credit quality of borrowers or counterparties. In a bank's portfolio, Credit Risk arises mostly from lending activities of the bank, when a borrower is unable to meet its financial obligations emanating from potential changes in the credit quality / worthiness of the borrowers or counterparties.

Credit Risk Management encompasses a host of management techniques, which help the banks in mitigating the adverse impacts of credit risk. The objective of the Credit Risk Management is to identify, measure, monitor and control credit risk by adopting suitable methodology.

The Bank has formulated Loan Policy which stipulates various prudential norms, bench marks, guidelines for sanctioning of credits and recovery of the same. The Bank has also formulated a separate Credit Risk Management Policy, besides a Policy on Credit Risk Mitigation and Collateral Management.

Credit Risk is assessed by a robust internal credit risk rating system. Credit Risk Rating is the process wherein the merits and demerits of a borrower are captured and assigned with scorings, which enables the Bank to take a view on the acceptability or otherwise of any credit proposal.

Credit Risk Management Policy

The Bank has put in place a well-structured Credit Risk Management Policy duly approved by the Board. The Policy document defines organisation structure, role and responsibilities and the processes whereby the Credit Risks carried by the Bank can be identified, quantified and managed. Credit Risk is monitored on a bank wide basis and the compliance with regard to the risk limits approved by the Credit Risk Management Committee(CRMC) / Board is ensured.

The Bank adopts the definition of 'past due' and 'impaired credits' (for reporting purposes) as defined by Reserve Bank of India under Income Recognition, Asset Classification and provisioning (IRAC) norms (vide RBI Master Circular dated 1st July, 2014).

MARKET RISK IN TRADING BOOK
Qualitative Disclosures:

Market Risk in trading book is assessed as per the Standardised duration method. The capital charge for HFT and AFS is computed as per Reserve Bank of India prudential guidelines.

a. Definition of market risk

Market risk refers to the potential losses arising from volatility in interest rates, foreign exchange rates, equity prices and commodity prices. Market risk arises with respect to all market risk sensitive financial instruments, including securities, foreign exchange contracts, equity and derivative instruments as well as from balance sheet or structural positions.

b. Portfolios covered under standardized approach

The bank's portfolio comprises of Government securities, equity shares and forex portfolio.

c. Strategies and processes

1) The Bank has put in place a comprehensive Market risk management Framework to address the Market risks (bank wide) including that of the Trading Book.

2) Within the above framework, various policies of the Bank prescribes Limits like Value at Risk (VaR) for HFT Securities and Foreign Currencies, Duration, Minimum holding level for liquid assets, Exposure limits, Forex open position limits (day light / overnight), Stop-Loss limits etc .

3) Risk profiles are analyzed and the effectiveness of risk mitigants is regularly monitored through Mid Office.

4) Adherence to limits are being monitored by dedicated mid office, reporting exceptions to the head of Risk Management Department, independent of Treasury / IBD operational units.

d. Risk Measurement

1) Values at Risk (VaR) numbers are arrived for Trading book Central Government securities and Foreign Currencies.

2) The positions are marked to market at stipulated intervals. The Duration / Modified Duration is computed and its adherence to the prescribed duration limits is ensured.

3) The Bank is computing capital charge on "Held for Trading" and "Available for Sale" categories using Standardized Duration Approach as required under RBI guidelines.

4) Stress testing analysis is done by applying rate shocks for parallel shift in the yield curve under current economic and political scenario.

OPERATIONAL RISK

Qualitative Disclosures:

Operational Risk is the risk of loss resulting from inadequate or failed processes, people and systems or from external events. Operational risk includes legal risk but excludes strategic and reputation risks.

The Bank has put in place Operational Risk Management Policy duly approved by the Board. This policy outlines the Organisation Structure and covers the process of identification, assessment/measurement and control of various operational risks.

The other policies adopted by the Bank which deal with the management of operational risks are Inspection Policy, Information Security Audit Policy and Policy on Modified code of conduct for Know-Your Customer & Anti-Money Laundering Standards.

Operational Risks in the Bank are managed through comprehensive and well-articulated internal control framework. Operational risk is mitigated by effecting suitable insurance coverage wherever necessary. The Bank has also put in place a compliance cell to supervise KYC & AML guidelines and off site monitoring of high value transactions. For accounting operations in the computerized environment suitable internal control system is maintained and a separate policy on I.T. Security is in place specifying the internal guidelines on access, control, communications, operations, personal security, business continuity management etc.

Quantitative Disclosures:

Capital charge for Operational Risk is computed as per the Basic Indicator Approach and the same is computed based on the average of the gross income, as defined in the New Capital Adequacy Framework guidelines, for the previous three years i.e. 2011-12, 2012-13 and 2013-14. The required capital is ₹ 131.16 crore.

TABLE DF - 9
INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)
Qualitative Disclosures:

Interest rate risk is the risk where changes in the market interest rates might affect a bank's financial condition. Changes in interest rates affect both the current earnings (earnings perspective) as also the net-worth of the Bank (economic value perspective). The risk from earnings perspective can be measured as impact in the Net Interest Income (NII) or Net Interest Margin (NIM). Similarly, the risk from economic value perspective can be measured as drop in the Economic value of Equity (EVE).

The impact on income (earning perspective) is measured through use of Gap Analysis by applying notional rate shock up to 200 bps as prescribed.

For the calculation of impact on earnings, the Traditional Gap is taken from the Rate Sensitivity statement and based on the remaining period from the mid point of a particular bucket, the impact for change in interest rates up to 200 bps is arrived at for one year time horizon.

The Bank has adopted Duration Gap Analysis for assessing the impact (as a percentage) on the Economic Value of Equity (Economic Value Perspective) by applying a notional interest rate shock of 200 bps. As per the draft guidelines issued by RBI DBOD.No. BP. 7/21.04.098/ 2005-06 dated 17th April, 2006, the Bank calculates Modified Duration Gap on Assets & Liabilities and arrive at the impact on Economic Value of Equity. On 4th November, 2010, RBI issued a circular on Interest Rate Risk using Duration Gap Analysis and these guidelines have also been taken into account while calculating IRRBB. The Bank is calculating IRRBB on a quarterly basis.

Quantitative Disclosures:

- The impact of change in Interest Rate i.e. Earnings at Risk for 200 bps interest rate shock as on 31st March, 2015 is ₹ 115.93 crore.
- The impact of change in market value of Equity for an interest rate shock of 200 bps as on 31st March, 2015 is 4.35%.

TABLE DF - 10
GENERAL DISCLOSURES FOR EXPOSURES RELATED TO COUNTERPARTY CREDIT RISK

Counterparty Credit Risk (CCR) is the risk that a counter party to a transaction could default before the final settlement of the transaction cash flows. Unlike a firm's exposure to credit risk through a loan, where the exposure to credit risk is unilateral and only the lending bank faces the risk of loss, CCR creates a bilateral risk of loss to either parties.

Counterparty credit risk in case of derivative contracts arises from the forward contracts. The subsequent credit risk exposures depend on the value of underlying market factors (e.g., interest rates and foreign exchange rates), which can be volatile and uncertain in nature. The Bank does not enter into derivative transactions other than forward contracts.

Credit exposures on forward contracts

The Bank enters into the forward contracts in the normal course of business for proprietary trading and arbitrage purposes, as well as for our own risk management needs, including mitigation of interest rate and foreign currency risk. Derivative exposures are calculated according to the current exposures method.

Counterparty Credit exposure as on 31st March, 2015

(₹ in crore)

Nature	Notional Amount	Potential Exposure @ 2%	Current exposure	Total credit exposure
Forward contracts	5892.16	108.80	51.62	160.42

The capital requirement for Bank's exposure to Qualified Central Counter Party (QCCP) has been computed for the exposure to Clearing Corporation of India (CCIL) as on 31st March, 2015 amounting to ₹ 36.80 crore with risk weighted assets of ₹ 15.52 crore, which is forming part of credit risk total. In terms of RBI circular dated 28th March, 2013, the Credit Valuation Adjustment (CVA) risk capital charge has been computed, which amounted to ₹ 0.42 crore (the corresponding risk weighted value of ₹ 4.69 crore has also been added to credit risk weighted assets).
